

# PCI Compliance Made Easy

## The Payment Card Industry Data Security Standard

In September of 2006, a group of five leading payment brands including American Express, Discover Financial Services, JCB, MasterCard Worldwide and Visa International announced the formation of the PCI Security Standards Council (PCISSC). The goal of the council is to ensure that merchants and service providers who send data electronically, have taken steps to protect transactions. These requirements apply to all payment card network members, merchants and service providers that store, process or transmit cardholder data, and affect all payment channels, including retail (brick-and-mortar), mail/telephone order and e-commerce.

These requirements are imposed by the PCISSC, not by any government agency. **Meeting the requirements of the Council is now a prerequisite to doing business with the major credit card companies.** You don't have to meet these standards—but you may not be able to process credit cards either.

**SAFE LP is the best choice for organizations** with an immediate focus on reducing the cost and increasing the effectiveness of audit response while meeting and sustaining compliance with a particular regulatory or industry standard like PCI or HIPAA.

### Intellitactics SAFE appliance provides users with:

- Audit ready reporting to **prove compliance**
- Real time access to security events and logs - continuous parsing and normalized logs improve understanding
- Rapid search using event explorer and visual analysis accelerate investigation to improve incident response
- Role based dashboards display up to the minute status of IDS, anti-virus and much more

**Companies that do not meet the PCISSC's requirements may be barred from processing credit cards, incur higher processing fees and even face fines up to \$500,000.**

**There's more to compliance than collecting logs.** But you can comply with standards without spending more on staff or hardware. Quest and Intellitactics have teamed to offer two solutions: a highly capable, multi-function SIEM software package and a simple to deploy appliance which not only verify and validate that you're in compliance with internal policies, regulatory standards (SOX, HIPAA, NERC, FISMA) or industry standards (PCI DSS), but also ensures every day compliance by simplifying daily tasks like security event monitoring, log analysis and reporting.

### PCI Compliance as a Service

If you're not ready to own and operate your own SIEM software or appliance, choose Security as a Service featuring Intellitactics SAFE. **Quest can help you enjoy all the benefits of SAFE without the overhead.** With PCI Compliance as a Service, Quest takes care of everything for you. Jump start your preparation for compliance audits and build a relationship with Quest's experienced security professionals. One decision lets you accelerate the start of your project with a market leading product – Intellitactics SAFE.

**Quest's "Compliance Vulnerability Scanning" Professional and Managed Services are MasterCard Site Data Protection Certified (SDP Compliant Certificate Number: 3845-01-01).**

**You choose the right solution for you** based on the size of your managed infrastructure and staff, purchasing power and need for custom or unique requirements. The SAFE appliances are right-sized meaning they come in multiple hardware configurations designed to store logs and provide the performance you need regardless of the number of data sources or number of events. You decide what works best for your situation and we make it happen.

**Approved Scanning Vendor (ASV)**  
as recognized by the PCI Security Standards Council

### You have the following options when you choose Quest and Intellitactics SAFE:

- Own and manage it yourself
- Own it and let Quest manage it for you
- Quest owns the appliance and you manage it
- Quest owns and manages for you

### The core requirements of the PCISSC are:

- Build and Maintain a Secure Network
- Protect Cardholder Data
- Maintain a Vulnerability Management Program
- Implement Strong Access Control Measures
- Regularly Monitor and Test Networks

While these requirements may appear daunting, Quest can perform scanning that will help identify any shortcomings or non-compliance problems that may exist in your systems. These scans can be performed remotely or on premises. And the cost for this type of scanning is surprisingly low.

## Choose who owns and manages your SAFE Appliance...

SAFE Appliance Ownership/Management Options				
Owned by:	You	Quest	You	Quest
Managed by:	You	You	Quest	Quest

...And your Level of Security

**Discover Cost-Effective PCI Compliance and Audit Performance.**

**Choose the service that meets your needs and your budget. Choose Quest and Intellitactics.**
